

# Dura-Chem, Inc.

*Modern Technology; Traditional Service  
Since 1978*

## MAJOR PRODUCT LINES

Plating Chemistry  
Anodizing Chemistry  
Powder Coating Chemistry  
Cleaners & Degreasers  
Rust Prevention  
Lubricants & Coolants  
Hydraulic Fluids  
Paint Stripper  
Fluid Handling Systems  
Degreasing Equipment  
Powder Coating Filler

## LAB SERVICES

Custom Lab Analysis  
For All Chemical Types

## SPECIALTY PRODUCTS

Drawing Compounds  
Black Oxide Salts  
Zinc Die Cast Cleaners  
Heatbath Chemicals  
Chromate Conversion  
Lincoln Chemicals

## ACCESSORIES

Tanks\Baskets  
Filters  
Spin Dryers  
Plating Barrels  
Heaters – Controls

## CLEANING EQUIPMENT

Dip Tanks  
Hand Parts Washers  
Ultra-Sonic Units  
Spray Cabinets  
Custom Tanks

## ANODIZING CHEMISTRY

### **Multi Clean NG2**

Multi Clean NG is a powder detergent that is very effective in cleaning aluminum of dirt, grease, oil and grime prior to etching without any staining even at very high temperatures.

### **Aluma Clean B.V.**

Aluma Clean B.V. is a liquid detergent that is very effective in cleaning aluminum of dirt, grease, oil and grime prior to etching without any staining even at very high temperatures.

### **Aluma Prep 3**

Aluma Prep 3 is a liquid compound (acidic in nature) formulated to provide cleaning, etching and deoxidizing of aluminum in one tank at room temperature. This unique product accomplishes essentially the same results as the multiple-step operation it is designed to replace.

### **Dura Etch 6**

Dura Etch 6 is a highly alkaline etchant for aluminum. This product contains a high percentage of caustic soda and chelators to provide effective results and long tank life. This formulation contains a foam control agent to prevent excessive foaming.

### **Dura Etch 4**

Dura Etch 4 is a highly alkaline etchant for aluminum. This product contains a high percentage of caustic soda and chelators to provide effective results and long tank life. This formulation contains a foam control agent to prevent excessive foaming.

### **LND**

LND is a liquid compound formulated to provide deoxidizing of aluminum at room temperature. This unique product provides essentially the same results as the chromated material but contains no chromates or sulfates.

### **A.C. 100 (Powder) A.C. 300 (Liquid)**

A.C. 100 & A.C. 300 are anodic seals for anodizing aluminum. Either liquid or powder form will provide excellent corrosion resistance with ease in application. Both products have proven beneficial in passing dye stain tests.

### **Duralene N**

Duralene N is a liquid additive used in an anodic seal bath to reduce smut deposits on parts. This product will allow you to eliminate wiping down parts after process.

### **Anocoat A.C.S.**

Anocoat A.C.S. is a liquid additive used in the sulfuric anodizing bath to provide accelerated coating formation while allowing bath to be run at warmer temperatures.
